

METHOD FOR BOOTING COMPUTER SYSTEM WITH MEMORY CARD

ABSTRACT OF THE DISCLOSURE

A method for initiating a computer system through a memory card is provided. The computer system includes a memory card reading device, a control circuit, and a basic input-output system memory. The method includes steps of providing the memory card storing therein a basic input-output system, inserting the memory card into the memory card reading device, selecting a path of initiating the computer system through the memory card, disabling the basic input-output system memory by the control circuit, and initiating the computer system through reading the basic input-output system by the control circuit.
